# Supply chain planning and supplier scheduling

## Who Should Attend?

---

- Logistic Managers
- Staff Logistics
- Freight and unloading sector
- Experts in the supply chain and logistics

## Seminar Outline

---

### DAY 1

- Enterprise Resource Planning
- Is an information system project, designed to coordinate all resources, information and activities needed to complete practical procedures, such as accounting and billing.
- ERP supports most systems actions that manage a variety of operational functions such as manufacturing tasks, supply management, finance, enterprise, human resources and CRM, all in a unified database.
- ERP relies on a common database and a special programming design, shared database

### DAY 2

- Ideally data is integrated between different business processes. In practice, the ERP may include a set of disparate applications, each running separate data stores in a single database.
- Supply chain management
- Cash order, inventory, purchase, product problem, supply chain planning, supplier scheduling, goods inspection, claims procedure and commissions calculation

### DAY 3

- Finance
- General ledger, cash management, accounts payable, accounts receivable and fixed assets
- Projects

#### DAY 4

- Costs, invoices, expenses and activity management
- HR
- Payroll, training, daily preparation and preparation of lists and entitlements

#### DAY 5

- Customer Relationship Management
- Sales, marketing commissions, services, customer contacts and phone support center
